Optical Surface Monitoring System (OSMS)

**Duration**
Dependent on the system configuration (up to 2 days).

**Target audience**
Radiation Therapists/ Radiographers and Medical Physicists who are responsible for treatment delivery. Recommended Group size: Up to 6 people.

**Prerequisites**
The attendees must have a working knowledge of the treatment machine and treatment delivery process. A basic knowledge of simulation and planning process is also desirable.

**Aim**
To ensure that users are competent and confident in using Varian OSMS. After completion of this course the participants will be able to use OSMS for accurate patient positioning and intrafraction motion control, as well OSMS related routine QA and safety procedures.

**Program**
- Overview of the OSMS and its functions within the department.
- Learn and practice the use of the OSMS on the treatment machine.
- QA, safety and calibration procedures.
- Treatment Workflow.
