John W. Kuo (650) 493-4000
(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Introduction:

Varian Medical Systems, Inc. is a Delaware corporation originally incorporated in 1948 as Varian Associates, Inc. Varian Medical Systems, Inc. and subsidiaries are referred to herein as the “Company”.

The Company’s operations are grouped into two reportable operating segments: Oncology Systems and Imaging Components. The Imaging Components segment includes X-ray imaging tubes and flat panel products, as well as security and inspection products. Ginzton Technology Center (“GTC”) and Varian Particle Therapy (“VPT”) business are reflected in the “Other” category, because these operating segments do not meet the criteria of a reportable operating segment.

Description of Segments:

The Oncology Systems business segment designs, manufactures, sells and services hardware and software products for treating cancer with conventional radiotherapy including Intensity-Modulated Radiation Therapy (“IMRT”), Image-Guided Radiation Therapy (“IGRT”) and volumetric modulated arc therapy, stereotactic body radiotherapy, stereotactic radiotherapy, stereotactic radiosurgery and brachytherapy. Products include linear accelerators, brachytherapy afterloaders, treatment simulation and verification equipment and accessories; as well as information management, treatment planning and image processing software. These products enable radiation oncology departments in hospitals and clinics to perform conventional radiotherapy treatments and offer advanced treatments such as fixed field IMRT, IGRT, volumetric modulated arc therapy, and stereotactic radiotherapy, as well as to treat patients using brachytherapy techniques. The Company’s products are also used by neurosurgeons to perform stereotactic radiosurgery. Customers worldwide include university research and community hospitals, private and governmental institutions, healthcare agencies, physicians’ offices and cancer care clinics.

The Imaging Components business segment designs, manufactures, sells and services X-ray imaging components for use in a range of applications, including radiographic or fluoroscopic imaging, mammography, specific procedures, computed tomography and industrial applications. The Company sells its X-ray imaging components to large imaging system original equipment manufacturer (“OEM”) customers that incorporate them into their medical diagnostic, dental, veterinary and industrial imaging systems. The Company also sells its X-ray tubes and its flat panel digital image detectors for filmless X-ray imaging (commonly referred to as “flat panel detectors” or “digital image detectors”) to small OEM customers, independent service companies and directly to end-users for replacement purposes.

The Imaging Components business segment also designs, manufactures, sells and services security and inspection products, which include Linatron® X-ray accelerators, imaging processing software and image detection products for cargo screening at ports and borders and nondestructive examination in a variety of applications. The Company generally sells security and inspection products to OEM customers who incorporate these products into their inspection systems.

The “Other” category is comprised of VPT and the operations of the GTC.

The VPT business develops, designs, manufactures, sells and services products and systems for delivering proton therapy, another form of external beam radiotherapy using proton beams, for the treatment of cancer. Although proton therapy has been in clinical use for more than four decades, it has not been widely deployed due to high capital cost. The current focus is commercializing the Company’s ProBeam™ proton therapy system and bringing expertise in traditional radiation therapy to proton therapy to improve its clinical utility and to reduce its cost of treatment per patient.

GTC, the scientific research facility, develops technologies that enhance current businesses or may lead to new business areas, including technology to improve radiation therapy and X-ray imaging, as well as other technology for a variety of applications, including security and cargo screening. GTC is also actively engaged in searching for chemical or biological agents that work synergistically with radiation to improve treatment outcomes.

Section 1 – Conflict Minerals Disclosure**Item 1.01. Conflict Minerals Disclosure and Report**

The Company has concluded in good faith that during 2014,

- a) The Company has manufactured and contracted to manufacture products as to which “conflict minerals” (as defined in Section 1, Item 1.01 (d)(3) of Form SD) are necessary to the functionality or production of such products.
- b) Based on a “reasonable country of origin inquiry” (“RCOI”), the Company knows or has reason to believe that a portion of its necessary conflict minerals originated or may have originated in the Democratic Republic of the Congo or an adjoining country (collectively, sometimes referred to as the “Covered Countries”) but is unable to determine that those necessary conflict minerals are from recycle or scrap sources.

The Company’s reasonable country of origin inquiry employed a combination of measures to determine whether the necessary conflict minerals in any of the Company’s products originated from the Covered Countries. The Company’s primary means of determining country of origin of necessary conflict minerals was by conducting a supply-chain survey with direct vendors using the EICC/GeSI Conflict Minerals Reporting Template (“CMRT”). The Company surveyed its direct vendors that were determined to have tin, tantalum, tungsten and gold (“3TG”) in their products. Additionally, the Company used the CFSI website (<http://www.conflictreesourcing.org/>), smelter company websites and other online tools to provide additional country of origin information.

As a result of the reasonable country of origin inquiry conducted as described above, approximately 50% of the Company's vendors who contribute necessary conflict minerals to the Company's products have provided a response to the supply-chain survey. Below is a summary of the information collected from all supply-chain survey respondents.

Conflict Mineral	Countries of origin may include the following
Tantalum	Democratic Republic of the Congo*
Tin	Democratic Republic of the Congo*
Tungsten	TBD‡
Gold	TBD‡

* *The reported tantalum from the DRC came from 8 smelters all of whom have been audited and registered as conflict free by the Conflict Free Smelter Initiative ("CFSI"), which is internationally recognized for conflict free smelter audits. The reported tin from the DRC came from a smelter who has been audited and registered as conflict free by the CFSI.*

‡ *TBD means that the Company will attempt to collect more information for next year's report.*

In accord with Rule 13p-1 under the Securities Exchange Act of 1934 ("Rule 13p-1"), the Company has filed this Specialized Disclosure Form (Form SD) and the associated Conflict Minerals Report and both reports are posted to a publically available Internet site at <http://www.varian.com/csr>.

Item 1.02. Exhibits

Conflict Minerals Report required by Item 1.01 is attached at Exhibit 1.01.

Section 2 – Exhibits

Item 2.01. Exhibits

1.01. Conflict Minerals Report as required by Items 1.01 and 1.02.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

VARIAN MEDICAL SYSTEMS, INC.

(Registrant)

/s/ John W. Kuo

By John W. Kuo, Corporate Senior Vice President,
General Counsel and Corporate Secretary

June 1, 2015

VARIAN MEDICAL SYSTEMS, INC.
CONFLICT MINERALS REPORT
FOR THE YEAR ENDED DECEMBER 31, 2014

This report for the year ended December 31, 2014 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (“the Rule”).

Our due diligence measures have been designed to conform, in all material respects, with the framework in the Organization for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD 2011) (“OECD Framework”) and related Supplements for tantalum, tin, tungsten and gold (“3TG”). In accordance with the OECD Framework, our due diligence exercise included: (1) review and assessment of risk in the supply chain; and (2) a strategy to identify and respond to risks in the supply chain.

Our supply chain is complex, and there are multiple tiers between our company and the mine. We rely on our vendors to provide information on the origin of the conflict minerals contained in components that are included in our products. For reporting year 2014, we took similar steps as were taken for reporting year 2013. To identify and assess risk in the supply chain, we engaged those vendors who provide the substantial majority of our components and whose products we believe are likely to contain conflict minerals. We conducted a survey of these vendors to determine whether the necessary conflict minerals in components contained in our products were or were not DRC conflict free (as defined in the Rule). The survey requested vendors to provide the country of origin of any conflict minerals and the facilities used to process these minerals. We received responses from vendors representing approximately 50% of those with 3TG in their products, containing the names and locations of smelters and refiners which process conflict minerals used in components provided by our vendors. We reviewed and compared the responses with other information in our possession and, where appropriate, made further inquiries of our vendors. The initial and subsequent responses from vendors did not contain sufficient information to determine the country of origin of all the conflict minerals in our products.

Our due diligence verified smelters and refiners identified by our vendors that are listed in Appendix A below.

Our products include but are not limited to linear accelerators, brachytherapy afterloaders, treatment simulation and verification equipment and accessories, information management, treatment planning and image processing software, X-ray imaging components, Linatron® X-ray accelerators, imaging processing software and image detection products and proton therapy products. These products are more fully described in our Annual Report on Form 10-K for the year ended September 26, 2014, which can be accessed at <http://investors.varian.com>. We have concluded that the products listed above and completed during 2014 are DRC conflict undeterminable (as defined in the Rule).
